### EDUCATIONAL NEEDS AND EXPECTED OUTCOME

In the Endovascular era is important that surgeons do not lose their familiarity with the surgical skill indispensable for dealing with complications that may arise during endovascular treatment, or for confronting hybrid procedures. The participants would benefit from the experience of expert tutoring in the whole vascular surgery, in a very interactive and stimulating educational context.

### COURSE OBJECTIVES

This specific vascular course aims at improving knowledge of anatomical access to the thoracic and abdominal aorta and its branches, carotid and peripheral fields including anatomic laparotomic and laparoscopic dissections and practice on fresh cadavers.

The participants under the supervision of experts vascular and endovascular surgeons will be lead to perform the most common vascular surgery reconstruction and techniques. Moreover, they will use the most part of endovascular devices thanks the presence of a last generation C-Arm and translucency tables.

The course is open to Vascular and Cardiac Surgeons from around the world who have successfully completed their surgical training or are at an advanced level of training.

The official language is English.
